

A good way to get rid of garbage

A news article said a company in Southern California would like to build a state-of-the-art facility at no cost to Santa Cruz County county at the Buena Vista Landfill to incinerate our garbage and generate electricity. Now there is a group that opposing this project. What's wrong with a facility that gets rid of garbage, recycles the leftovers, and generates electricity?

What a novel approach. Maybe we could build the facility that removes salt from seawater next door, so that these two plants would solve two local problems and provide high-paying jobs and more property taxes?

I guess the opposing group(s) want to keep burying the garbage along with their heads.
